

***MISSISSIPPI VALLEY UNIFORM
REGIONAL BARLEY NURSERY***

2006

FOR OFFICIAL USE ONLY

UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL RESEARCH SERVICE
NORTHERN PLAINS AREA
AND
COOPERATING STATE AGRICULTURAL EXPERIMENT STATIONS

MISSISSIPPI VALLEY UNIFORM REGIONAL BARLEY NURSERY 2006

Compiled by Michael C. Edwards

This is a joint progress report of cooperative investigations underway in the State Agricultural Experiment Stations and the Agricultural Research Service of the United States Department of Agriculture containing preliminary data that have not been sufficiently confirmed to justify general release; interpretations may be modified with additional experimentation. Confirmed results will be published through established channels. The report is primarily a tool for use of cooperators and their official staffs and to those persons having direct and special interest in the development of agricultural research programs.

This report includes data furnished by the State Agricultural Experiment Stations, the provinces of Manitoba and Saskatchewan, Agriculture and Agri-Food Canada, and the Agricultural Research Service, and was compiled in the USDA-ARS Cereal Crops Research Unit at North Dakota State University. The report is not intended for publication and should not be referred to in literature citations nor quoted in publicity or advertising. Use of the data may be granted for certain purposes upon written request to the agency or agencies involved.

ACKNOWLEDGEMENT: Dr. James Hammond [Department of Plant Sciences, North Dakota State University] developed the computer program used to evaluate and compile the data for most of this report.

List of Stations and Cooperators

2006 Mississippi Valley Uniform Regional Barley Nursery

<u>Stations</u>	<u>Cooperators</u>
Aberdeen, Idaho	Don Obert, D. Burrup, Chris Evans, USDA, Agricultural Research Service
Ames, Iowa	Jean-Luc Jannink, Ron Skrdla
Hamiota, Manitoba	M. C. Therrien, Agriculture Canada
Winnipeg, Manitoba	J. Gilbert, T. Fetch, A. Tekauz, Agriculture Canada
Caro, Michigan	R. D. Freed, Michigan State University
Crookston, Minnesota	Kevin Smith, University of Minnesota
Morris, Minnesota	Kevin Smith, University of Minnesota
Bottineau, North Dakota	D.B. Cooper, S. Askelson, C. Allen, Busch Agricultural Resources
Sidney, Montana	D.B. Cooper, S. Askelson, C. Allen, Busch Agricultural Resources
Carrington, North Dakota	R. D. Horsley, J. D. Franckowiak, North Dakota State University
Fargo, North Dakota	R. D. Horsley, J. D. Franckowiak, North Dakota State University
Osnabrock, North Dakota	R. D. Horsley, J. D. Franckowiak, North Dakota State University
Saskatoon, Saskatchewan	Bryan Rossnagel, B. L. Harvey, Tom Zatorski University of Saskatchewan
Madison, Wisconsin	H. Kaepler, J. Mochon, University of Wisconsin

2006 Mississippi Valley Barley Nursery

Summary

Nine locations contributed useable data for this year's report. The substitution of Osnabrock for Langdon continues (about 12 miles east). The reader is referred to the "Nursery Conditions" section immediately following this summary for other comments concerning specific locations.

Average planting date was 3 days earlier than the 30-year average, while average heading date was about 5 days earlier than the average. The average planting date of April 24th was one day earlier than last year. Heading date (June 20th) was seven days earlier than last year.

Average yield (5191 kg/ha or 96.5 bu/a) was well above the 30-year average, but well below the 30 year high of 2004. Entries with the best yields were M126, 2ND21867, 2ND21863, ND21306, and SR410.

Three stations reported test weight; the average of 63.2 kg/hl was better than that of last year. The greatest test weights were recorded for 2ND21867, Conlon, 2ND21863, Lacey, and ND21306.

Lodging data were reported from only two locations, Carrington and Osnabrock. The entries with the least lodging were ND20508, 2ND22927, ND20666, 2ND21863 and 2ND22996. The reader should remember that 0% lodging was entered for all entries in 1996 due to a lack of data. Thus, the 10-year averages were still somewhat skewed by the 1996 data last year. This year, the 1996 data dropped off and no longer affects the averages. Average plant height was 76.1 cm, which is quite a bit shorter than the 30 year average. Shortest entries were ND20666, 2ND21867, M126, ND21532, and M125.

Kernel plumpness data were reported from Hamiota (Brandon) and Sidney. Please refer to Table 18 for further information.

Disease data from the Cereal Research Centre in Winnipeg are posted in Table 19. Other disease data appear in Tables 20 and 21 (from Brandon).

NURSERY CONDITIONS

MANITOBA:

HAMIOTA: Previous crop: Summer fallow with compost incorporation
Soil type: Pipestone clay, heavy textured
Fertilizer available: 80 lbs/a N; 50 lbs/a P; 300 lbs/a K.
added: none
Remarks: In spite of record low rainfall after June 1st, plots yielded very well due to underground aquifer at approx. 70 cm below ground; local phenomenon.

MICHIGAN:

CARO: Previous crop: .
Soil type: .
Fertilizer available: .
added: .
Remarks: .

MINNESOTA:

CROOKSTON: Previous crop: soybeans
Soil type: Wheatville, silt-loam.
Fertilizer available: 18 lbs/a N; 16 lbs/a P; 346 lbs/a K.
added: 200 lbs 46-0-0.
Remarks: The nursery had very favorable growing conditions from planting til flowering, then very little rain until harvest.

MORRIS: Previous crop: soybeans.
Soil type: Nutley clay.
Fertilizer available: lbs/a N; lbs/a P; lbs/a K.
added: broadcasted 30 lbs. N/a urea.
Remarks: The nursery had very favorable growing conditions through harvest and no lodging occurred.

NORTH DAKOTA:

CARRINGTON: Previous crop: soybeans.
Soil type: Heimdal loam, medium
Fertilizer available: 57 lbs/a N; 16 lbs/a P; 270 lbs/a K
added: 75 lbs/a N
Remarks: Planting moisture was adequate this spring. Crop emergence was excellent. Temperatures were high during the late spring and into summer. There was also more foliar disease at this location than at

other locations due to irrigation moisture. Yields were average to slightly below average for the location.

FARGO:	Previous crop: Soil type: Fertilizer available: added: Remarks:	soybeans Fargo, silty clay loam 15 lbs/a N; 19 lbs/a P; 450 lbs/a K 85 lbs/a N; lbs/a P. Planting moisture was adequate for the Fargo nursery. However, there was little rain during the growing season. Disease pressure was low due to the lack of moisture. Yields were close to average, however, due to the presence of adequate subsoil moisture. Seed had great color as well as good test weight and plumpness.
OSNABROCK:	Previous crop: Soil type: Fertilizer available: added: Remarks:	soybean . . 18 lbs/a N; 15 lbs/a P; lbs/a K. 80 lbs/a N; lbs/a P; lbs/a K. Soil moisture at planting was adequate. Crop emergence was excellent. Lodging was also noted at this location. Hot and dry weather stressed the crop during the late spring and early summer. Yields were average for this location.
BOTTINEAU:	Previous crop: Soil type: Fertilizer available: added: Remarks:	canola. nursery lost.
SIDNEY (MT):	Previous crop: Soil type: Fertilizer available: added: Remarks:	Sugarbeets. The nursery was seeded about a week earlier than normal, into a good seedbed with adequate moisture. Two weeks after planting the nursery received a heavy rain/snow that crusted the soil at emergence. We rotary hoed the entire nursery to help with the emergence issues. This procedure helped, but some yield loss had already occurred. During the summer the nursery progressed normally with very little lodging or disease pressure. Harvest was two weeks earlier than normal with good yields and acceptable statistics.
WISCONSIN:		
MADISON:	Previous crop: Soil type:	soybeans St. Charles, loam

Fertilizer available: .
added: none
Remarks: Planting was made in mid-April into a good seedbed. Experienced greater than average rainfall and cooler temperatures in the early season. Noticed some plots with uneven germination. The weather pattern was 2-3 days of rain followed by 2-3 days of sun, with very few periods of prolonged sunshine. Storms passed through the area on 7/20 and most plots were lodged or leaning at harvest. Yields and test weights were good. Levels of foliar disease were higher this year compared to the last 2 years and a very small amount of smut was observed occasionally throughout the nursery.

SASKATCHEWAN:

KERNEN: Previous crop: .
Soil type: .
Fertilizer available: .
added: .
Remarks: .

FHB = FHB visual score (0-5)

0 = no infection

1 = incidence low, up to 5% of spikes;

severity low, 1 or 2 kernels per spike affected (up to 7% of head)

2 = incidence low to moderate, 5 to 15% of spikes infected;

severity low to moderate, 1 to 4 kernels (up to 15% of head)

3 = incidence moderate, 15 to 30% of heads;

severity moderate, 2 to 8 kernels (up to 25% of head)

4 = incidence moderate to high, 30 to 50% of spikes infected;

severity moderate to high, 4 to 12 kernels (up to 40% of head)

5 = incidence high, 50% or more spikes affected;

severity high, 5 to 15+ kernels (up to 50%+ of head diseased)
